PROTECTION THROUGH PERFECTION

*We matter when
Absorbable Haemostat matters*

Absorbable Haemostat (Oxidized Regenerated Cellulose)

Surgi-ORC is a natural, plant based Absorbable Haemostat, made up of Oxidized Regenerated Cellulose designed to stop capillary, venous and small arteriolar bleeding, when ligation and other conventional procedures are either ineffective or impractical.

Surgi-ORC Absorbable Haemostat: Features and Benefits

- Rapid Action: Haemostasis within 3 minutes
- Absorbable: Completely absorbable
- Biocompatible: No tissue reactions
- Antibacterial: Low pH leads to the bactericidal effect
- Adaptable: Can be cut into any desired dimension without fraying and applicable to various tissue thicknesses and surgery sites
- Easy to Use: Highly flexible and drapable; can be sutured
- Ready to Use: Applied, laid on, held against or wrapped around the bleeding surface in dry form
- Safer: No animal original or chalcogen substances
- Compliance: Compliance with United States Pharmacopeia

Why to use Surgi-ORC

- The plant based natural cellulose dissolved and extruded as a continuous fiber (regeneration). The fabric made from these fibers has uniform chemical composition. The oxidized form of these fabrics shows high stability and fluid absorption when compared with cotten-based products.
- Surgi-ORC Absorbable Haemostat is a sterile product made up of oxidized regenerated cellulose (polyoxyan hydro glucuronic acid).
- Surgi-ORC Absorbable Haemostat has no animal or chalcogen additive substances and can be sutured and cut without any wear.

Haemostatic mechanism:

The action mechanism of Surgi-ORC is independent from the blood coagulation mechanism of the body. Surgi-ORC absorbs the blood and forms a brown/black gelatinous mass, which aids clot formation at the site of application.

This gelatinous mass acts as a physical matrix for the platelets adherence. Platelets aggregation leads to the formation of a platelet-fibrin plug, hence, Haemostasis.

How Does Surgi-ORC Work?

Oxidized Regenerated Cellulose (ORC) absorbs blood and becomes a gel covering the site of vessel injury

Creates an area of low pH causing localized vasoconstriction

Provides a matrix for platelet adhesion, accelerating the formation of the platelet plug that will form the foundation of the fibrin clot

Where to Use :

- Cardiovascular Surgery
- Cardiothoracic Surgery
- Neurosurgery
- General Surgery
- Obstetrics Surgery
- Gynaecology Surgery
- Urologic Surgery
- Orthopaedic Surgery
- Plastic Surgery
- ENT Surgery
- Dental Surgery

Application:

Applying Surgi-ORC is very simple, fast and safe. The haemostatic reticulum can be applied directly onto the dried bleeding area or organ. It acts locally and stops bleeding usually within 3 minutes, depending on the type of surgery and the intensity of bleeding.

The product can either be applied to the required area by gentle pressure, attaching it with a stitch, sewing it onto a tissue or an organ or it can be used as a form of tamponade.

Surgi-ORC ORIGINAL, Surgi-ORC FIBRIL, Surgi-ORC KNIT and Surgi-ORC NON-WOVEN haemostats are white or pale yellow in color and can be cut into desired sizes for different endoscopic surgeries. Surgi-ORC Absorbable Haemostats are fully absorbable with minimum tissue reaction.

Surgi-ORC ORIGINAL

- Fine weave of ORC
- Plant based cellulose
- Haemostasis in 3 minutes
- Completely absorbable
- Bactericidal properties
- Can be cut without fraying
- High flexibility & drapeability

Surgi-ORC FIBRIL

- Tufts of soft, light weight ORC
- Activates on larger surfaces
- Superior handling characteristic
- Completely absorbable
- Bactericidal properties
- Useful on irregular surfaces like in Orthopaedic, Cardiovascular, Neuro and Vascular Surgeries

Surgi-ORC KNIT

- Denser weave of ORC for heavier bleeding
- Haemostasis in 3 minutes
- Completely absorbable
- Bactericidal properties
- Cutting without fraying
- Density suitable for suturing
- Laparoscopic compatibility
- Diffuse organ bleeding
- Transplant procedures

Surgi-ORC NON- WOVEN

- Maximized Effect and superior handling
- Nonwoven design increases contact surface
- Needle punched with interlocking fibres
- Easy use in open and minimally invasive procedures
- Useful in urology, gynaecology, cardiovascular, general and peripheral vascular surgeries
